

## **Severance compensation**

This is not royalties that go to the State to compensate for using the States oil and gas resources.

Who does it go to?

How is it going to help the people who no longer have water?

Why is okay to takes one's livelihood away so others can benefit at their expense?

Is the collapse of a community justifiable so that others can profit from a taking of a water resource?

Why would the State Engineer consider this course of action a way forward in granting this application?

Water is not equivalent to oil and gas as it is already is being put to a beneficial use and has senior rights to its use over the junior rights of the LLC.
